kidaro

Kidaro for Schools

Same lesson. Every student reached.

Kidaro gets to know how each student thinks and learns, then adapts your material to fit them. Built with psychologists and educators, and reviewed and refined with SWPS University.

How it works

1 Get to know each student

A parent at home, or a teacher, answers questions about the student, about 10 minutes. The student then answers questions and plays 8 short games, about 25 minutes. They can talk or type, and there are no wrong answers.

2 A Learning Profile for every student

How they take in information, what holds their attention, and what helps them most. Short reading and listening profiles show how each student reads and listens best.

3 Material adapted to each student

Upload a text or a worksheet, and Kidaro rewrites it for each student's Learning Profile: the language, the structure, how things are explained, the examples and how information is organised. The learning goal stays the same. Adapted texts can be printed.

What it gives your school

- **Teachers** see how every student in their class learns, adapt material in a few clicks, and get a report written for teachers. Ada, the Cognitive Guide, answers their questions about any student in plain language.
  - ▸ Watch Ada answer a parent's question
- **The whole class in one step.** Upload one chapter, and every student gets their own version, adapted to their profile. One click, and the teacher sees every student's copy in one place.
- **Grade leads** see every class in one place: which students have a Learning Profile, whose profile is due for an update, and who may need extra attention.
- **School leaders** run it all under the school's own name and logo, and set sign-in rules, permissions and how long data is kept.

Not a test

Not a diagnosis. No scores. No labels.

Student information stays inside Kidaro. We only need a first name and last initial, and the school decides who sees what. Kidaro is GDPR and COPPA compliant, and parents give their consent before a student takes part.

One profile, used again and again.

A Learning Profile is built once and used for every new chapter after that. It stays with the student when their teacher changes.

A profile that grows with the student.

Teachers and parents can tell Ada what they notice along the way, and the Learning Profile updates with it. Every 6 months, students can also do a fresh profile, so it keeps up as they grow.

Groups built for each project.

Tell Ada what the project is and what it needs, and she builds the groups from the students' Learning Profiles. Groups can be balanced, so every team has the mix the project calls for, or set up on purpose to stretch students further. Students don't pick their own groups, and the teacher can still move anyone before the groups are set.

Who it's for

Learning Profiles for ages 7 to 10 are live now. Profiles for ages 11 to 17 go live in January, so the whole school is covered.

Kidaro is built to support COPPA and FERPA.
